

Load Management Program: Dual Fuel

Beyond being affordable, electric heat provides a clean, safe, and consistent form of heat.

This Dual Fuel Program encourages the use of off-peak electric heat on the Scenic Rivers Energy Cooperative's system.

If you are interested or have questions, please call us at 800-236-2141 and ask for Ron at ext. 563.

Requirements:

1. Backup heating system.
2. Backup must be automatic.
3. Installation of a separate meter.
4. Installation of a load control.

A **backup** heating system would be LP, natural gas, or fuel oil.

The **backup** must be **automatic** so that the electric heat can be turned on/off immediately.

A **separate meter** must be installed for us to determine kWh usage so that we can bill you at the lower rate.

A **load control** must be installed that allows us to control the cycling of the unit during peak times determined by Dairyland Power Cooperative (DPC).

Note: If you decline the load control management option, all heating and cooling will be at the current rate of \$0.1096.

<u>Months</u>	<u>Rate/kWh</u>
October thru May	\$0.0662
June thru September	\$0.0871
Meter Charge	\$4.80/month (\$0.16/day)

All rates are subject to additional power cost adjustments per board policy.

Peak Time Controls

During peak times, the electric **cooling** source will cycle 15 minutes on and then 15 minutes off up to 4 hours.

During peak times, the electric **heating** source will have potential to be controlled up to 12 hours in a 24 hour period.
